

***"What a great day out.
Met some great people,
had a tasty BBQ and we
planted over 800 trees
between us – I didn't realise
that working in the woods
could be so satisfying."***

Be Green as you Grow

Organisations could do more to offset their carbon footprint, however managing 'green' projects can be expensive and is not always easy or sustainable. And, in current times, while it is even harder to grow a business, there's even less of an appetite for 'green' initiatives.

However, Restoring Ancient and Working Woodland is a 'green' initiative worth considering. It is an accessible and sustainable scheme allowing organisations to offset CO₂ emissions and do much more. Involvement in RAWW can vary from simple financial support to volunteer 'tree planting' days where you can learn about woodland skills and biodiversity.

And to help in current times, your sponsorship will be match funded by the RAWW scheme – doubling the investment in the environment.

RAWW aims to turn neglected woodland into sustainable working environments, providing environmental benefits for decades to come. A working woodland is a healthy woodland.

To find out more about RAWW and how you can **be green as you grow**, contact Bob Cottell on 01305 257774 or bcottell@ippjoules.com.

Restoring Ancient and Working Woodland (RAWW) is managed by IPP in conjunction with Ayers Forestry. IPP manages the production of marketing literature in all regions worldwide, enabling companies to significantly reduce the environmental impact of transporting printed marketing materials around the globe.

Please note that though we endeavour to match sponsors with local woodland schemes, this cannot always be possible.
